Digiflo Technology

FREEDOM *for* MUMMY. FREEDOM *from* MUMMY.

For the first time in India an Instant Water Heater that is absolutely safe for children to take bath on their own without supervision. Every mother's main concern for her children: did I put ON/OFF the water heater switch? What if the water gets too hot for my kids and they get skin burnt? What if enough hot water is not ready for them to take bath one after another? What if I forget to switch off the water heater? The complete solution is now here.

Its special designed digitron technology allows you to preset the ideal temperature for them, while the digiflo technology activates the hot water circuit the moment the tap is turned on.

INTRODUCING FLOSENSOR TECHNOLOGY

A unique flosensor activates the heater moment water starts flowing from the tap, thus completely eliminating need to use ON/OFF switch.

Only KETKO capri digiflo model has the unique combination of DIGITRON and DIGIFLO technologies that score over all other instant water heaters

No.	KETKO capri digiflo with Digitron and Digiflo technologies	Problems not having Digitron and Digiflo in other Instant heaters	Benefits of KETKO capri digiflo
1	No ON/OFF switch with unique Flosensor Technology	Needs ON/OFF switch	Finish your bath, turn off tap water, heater shuts off. In other instant water heaters you have to remember to put switch off; otherwise water heater will remain ON
2	Flosensor Technology	Not available in any other brand	Eliminates the need for ON/OFF switch
3	Digitron Technology	Not available in many brands	You can pre-set temperature depending upon your needs
4	Huge saving on electric bills	Drain on electric consumption	The water heater is OFF the instant you turn off tap. No excess water gets heated and hence saves electricity. In other instant water heaters, the thermostat cuts at 65°C. Waste of excess hot water being generated
5	No monitoring of children and elderly people	Monitoring needed	Absolutely safe for children taking bath independently. Digitron Technology allows temperature to be pre-set and eliminates need for hot/cold mixer while flosensor technology eliminates ON/OFF switch
6	No danger of getting scalded while bathing	May get scalded while bathing	The Digitron technology helps you to pre-set the desired temperature while the Flosensor Technology eliminates the need for ON/OFF switch Thus the hot water always comes at the desired temperature
7	Water heater will not start if there is no water supply. No 'dry heating'	Heating element may get fused if water heater switched ON with no water	Completely avoids problems associated with 'dry heating'
8	Payback of full product	No payback	With savings in electricity consumption and depending on usage, payback with KETKO capri digiflo models is between 4 months - 8 months
9	Continuous saving even after crossing payback	Costs keep rising	With Ketko capri digiflo, you pay per use, whereas with other instant water heaters, excess hot water adds to electricity consumption

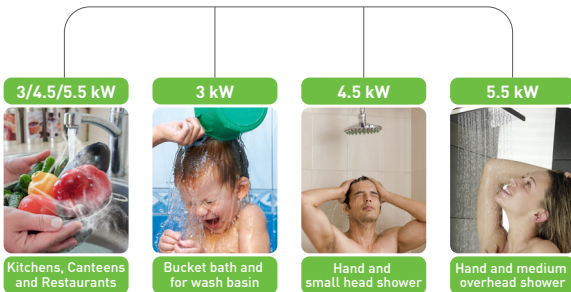

PLACEMENTS

Vertical

APPLICATION

- Bathrooms / Kitchen
- Ideal for children and elderly citizens
- 1 BHK / 2 BHK with single person taking bath
- 1BHK / 2 BHK with multiple users in short span of time
- Bathroom with low ceiling
- Bedrooms with independent children's bathrooms
- Saloons, parlours
- Commercial kitchens, canteens, restaurants

KETKO capri™ digiflo

OUTSTANDING FEATURES

RUST-PROOF

The outer body is made of engineering plastics assuring you years of rust-free and non-corrosive operation.

THERMAL CUT-OUT

Back up safety device cuts off power at 90°C to prevent over heating.

SAFETY VALVE

A heavy duty high pressure safety valve automatically releases excess pressure from the tank, thus preventing pressure build-up in the inner tank.

COPPER ELEMENT WITH NICKEL PLATING

For better conduction and hygiene.

DIGITAL TEMPERATURE CONTROLLER

Automatically cuts off at temperature set by you. Selection range 35°C to 65°C

6.5 BAR HIGH PRESSURE STANDARD MODEL (STD)

The inner tank is built sturdily with highest quality stainless steel SS 304 grade. The 6.5 BAR pressure is suitable for high-rise buildings.

WARRANTY

• 7 years warranty on inner tank • 2 years on entire unit

8 BAR HIGH PRESSURE HEAVY GAUGE MODEL (HG)

Ideal for pressure pump applications.
